## Name of First Chapter

This document can be used as a compilation of all work one produces in a course. For instance, it may include self-proofs of given theorems and all homework submissions.

### 1.1 Name of First Section

#### 1.1.1 Theorems

Contents of the first subsection of this document

**Theorem 1.1.** This is the first theorem.

**Proof.** This is my proof of the first theorem.

#### 1.1.2 Exercises

**Exercise 1.1.** This is the first exercise.

**Answer.** This is the first answer to the first exercise.

#### 1.1.3 Homework #1

**Definition H.1.1.** This is the first definition of the first homework.

**Exercise H.1.1.** This is the first exercise of the first homework.

**Proof.** This is the first proof of the first exercise of the first homework. We can easily reference labels from `main.tex`, e.g. [theorem 1.1](#).

**Exercise H.1.2.** This is the second exercise of the first homework.

**Proof.** This is the first proof of the second exercise of the first homework.

**Exercise H.1.3.** This is the third exercise of the first homework.

## 1.2 Name of Second Section

### 1.2.1 Theorems

**Theorem 1.2.** This is the second theorem.

**Proof.** This is the proof to the second theorem.

**Corollary 1.3.** This is a corollary that is trivial enough for the proof to be left unstated. As such, we use the `type in thmgroup = standalone` option.

### 1.2.2 Exercises

**Exercise 1.2.** Another exercise.

**Text.**

1 Some code as part of the answer to [exercise 1.2](#).

**Answer.** The answer to [exercise 1.2](#).

These are some hyperlinks with `zref-clever`: [exercise 1.1](#), [exercise 1.2](#), [exercise H.1.1](#), [exercise H.1.2](#), [exercise H.1.3](#). We can also reference theorems: [theorem 1.1](#). Furthermore, [external links](#)  are nicely formatted with the `\extref{<URL>}{<link name>}` command.
